pJUMP18-Uac | Part A (GGAG / AATG) | demo only, not order-ready

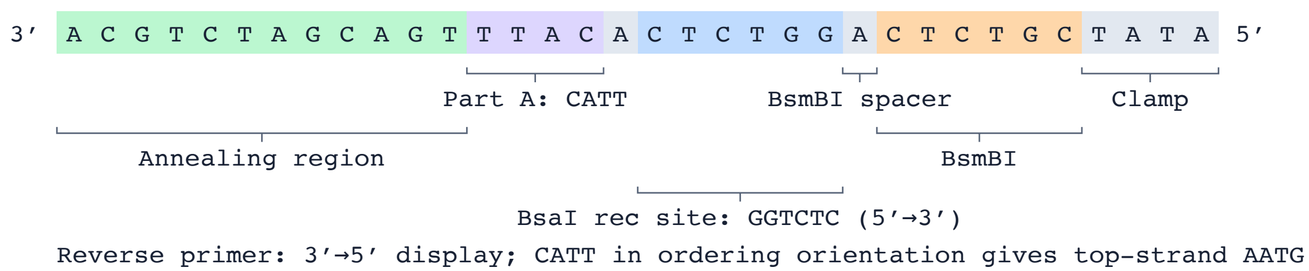
Forward primer: 5′ tail + 3′ annealing region

3′ A G C A G T C A T G C T . . . A C G T C T A G C A G T 5′

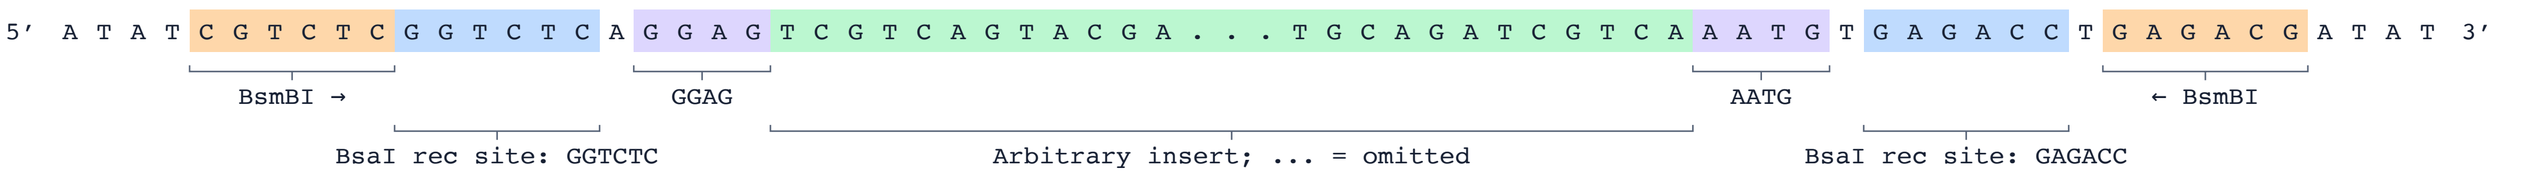
Original template; arbitrary sequence, omitted middle

5′ T C G T C A G T A C G A . . . T G C A G A T C G T C A 3′

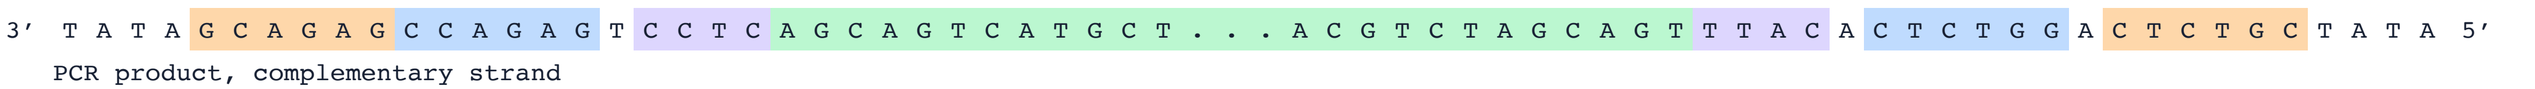
Original template, opposite strand



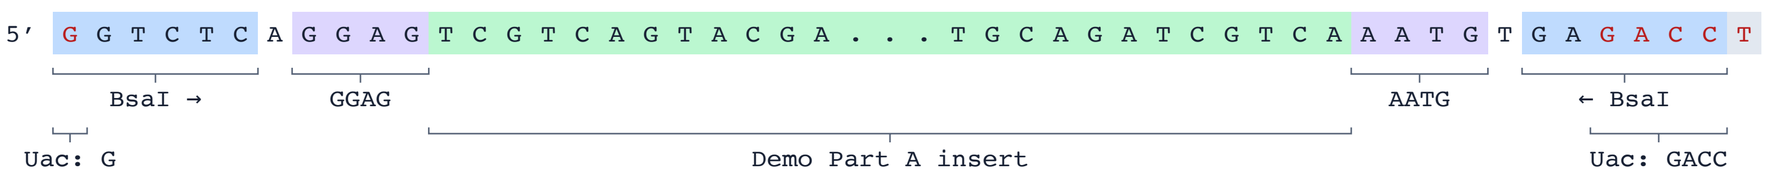
Reverse primer: 3′→5′ display; CATT in ordering orientation gives top-strand AATG



PCR product: blue BsaI annotations overlap BsmBI overhang bases; Part A junctions are purple



PCR product, complementary strand



After BsmBI cloning into pJUMP18-Uac: red bases = Uac; dark bases = PCR insert (immediately after ligation)

Sticky-end junctions pair one Uac strand with one PCR-insert strand; BsaI releases GGAG / AATG
